# Deploying Packages on Gno.land

The complete guide to deploying Gno packages

## Package Types

- Pure Packages ( /p/namespace/ ... )
- No persistent storage

```
package demo

func Add(a, b int) int {
   return a + b
}
```

- Realm Packages ( /r/namespace/ ... )
- Persistent storage

```
package demo

var counter int

func Increment() {
   counter++
}
```

# Deployment Commands

## Package Deployment

```
gnokey maketx addpkg \
    --pkgpath "gno.land/r/demo/counter" \
    --pkgdir "./counter" \
    --deposit "1gnot" \
    --gas-fee "1gnot" \
    --gas-wanted 200 \
    --broadcast \
    --chainid "staging" \
    --remote "https://rpc.gno.land:443" \
    MyKey
```

## **Mamespace Rules**

#### **Path Structure**

gno.land/[p|r]/[owner]/[package]

### **Ownership Rules:**

- 1. **Registered users**: gno.land/p/david/math
- 2. **Anonymous users**: gno.land/p/g1abc ... xyz/math
- 3. **Gno owned packages**: gno.land/r/sys/vals

## **Deployment Rights:**

- Only namespace owner can deploy
- Requires correct signing key
